

28.09.2026.

Transpose :
They used for row into column
and column into row

Syntax:

Paste Special

Paste link:

The Paste link is used when you want to copy data from one cell to another cell while keeping a connection to original data.

Paste Special operator:

Paste special operator it allows you to perform a calculation on the existing cell using the value copied.

eg:

	A	B
1	16	34
2	54	28
3	28	12
4	34	94

Copy a cell A data and paste to cell B
Ctrl ⊕ Alt ⊕ V to open paste special
and click any operator to change the B
cell value.

Result:

	A	B
1)	16	50
2)	54	82
3)	28	40
4)	34	128

Random number generation:

Create random number to using
This function.

Syntax:

=RAND BETWEEN (starting Number (small Number)
ending Number (highest
Number)

eg:

=RAND BETWEEN (10, 21)

= 14

Addition:

Syntax:

cell address 1 + cell address 2

eg:

A1 = 4 ; A2 = 6

= A1 + A2

Result = 10

Subtraction:

Syntax:

Cell address 1 - Cell address 2

Eg:

$$A_1 = 5 ; B_1 = 1$$

$$= A_1 - B_1$$

$$= 4$$

multiplication

Syntax:

Cell address 1 * Cell address 2

Syntax

Eg:

$$A_1 = 2 , A_2 = 3$$

Result:

$$= A_1 * A_2$$

$$= 6$$

Division:

Syntax:

Cell address 1 / Cell address 2

Eg:

$$A_1 = 5 , A_2 = 5$$

$$= A_1 / A_2$$

$$= 1$$

Reminder:

using the mod function to find

Reminder.

Syntax:

Mod (cell address 1, cell address 2)

eg:

$$A_1 = 7, A_2 = 5$$

$$= \text{Mod} (A_1, A_2)$$

Result = 2

④ \$ symbol in excel:

The symbol is used to lock a cell a cell reference.

eg:

Normal:

$$a_1^4 + b_1^1 = 5$$

$$a_2^5 + b_2^2 = 7$$

$$a_3^6 + b_3^3 = 9$$

$$a_4^7 + b_4^4 = 11$$

using \$ symbol to lock the cell reference

$$a_1^4 + \$b_1^1 \$1 = 5$$

$$a_2^5 + \$b_2^2 = 6$$

$$a_3^6 + \$b_3^3 = 7$$

$$a_4^7 + \$b_4^4 = 8$$
